Are battery energy storage systems generating new revenue streams for the health sector?

New revenue streams for the health sector from battery energy storage systems. The ambitious target of reaching net-zero greenhouse gas emissions by 2050 in the UK, which includes the decarbonisation of heat and electricity, means the increase of instantaneous power from non-dispatchable renewable energy sources (RESs).

Can a battery be used in hospitals for grid services?

As can be seen, there are limited discussions addressing the use of the battery in hospitals for grid services. The nearest research to this application is , which was not specific to hospitals or the health sector, and the hospital was one of three facilities included in uG, which also included a school and governmental public office.

What is the lowest levelized cost of energy for off-grid hospitals?

It was found that the lowest levelized cost of energy (LCOE) for medium and large off-grid hospitals is for a hybrid system that includes RES, BESS, and DG. BESS can be combined with RES in grid-connected hospitals to take advantage of battery incentives and to have a viable investment with a short payback period .

Why should healthcare facilities use Li-ion batteries?

In addition, Li-ion ability to switch between charging and discharging mode quickly allows it to respond to frequency events when participating in ancillary services market . Li-ion batteries are considered one of the best options for healthcare facilities due to their high number of cycles and high energy density.

Can a battery energy storage system provide flexibility to the grid?

Battery energy storage systems (BESS) can match loads with generation and can provide flexibility to the grid. This study is proposing the health sector as a new flexibility services provider for the grid through BESS. The health sector has large loads that run throughout the year, and by managing this load it can provide flexibility to the grid.

Why is intermittency a problem in a battery energy storage system?

The intermittency of RESs will cause stability issues for the grid resulting from the mismatch between generation from RES and load demand. Battery energy storage systems (BESS) can match loads with generation and can provide flexibility to the grid.
